

Github

1. How to upload files on Github using vscode without creating repository in github and clone in vscode?

github.com

<https://github.com/sailesh307/GitHubTutorial>

Prerequisites:

VsCode and Git must be installed on your Computer.

[Download Git](#)

[Download VSCode](#)

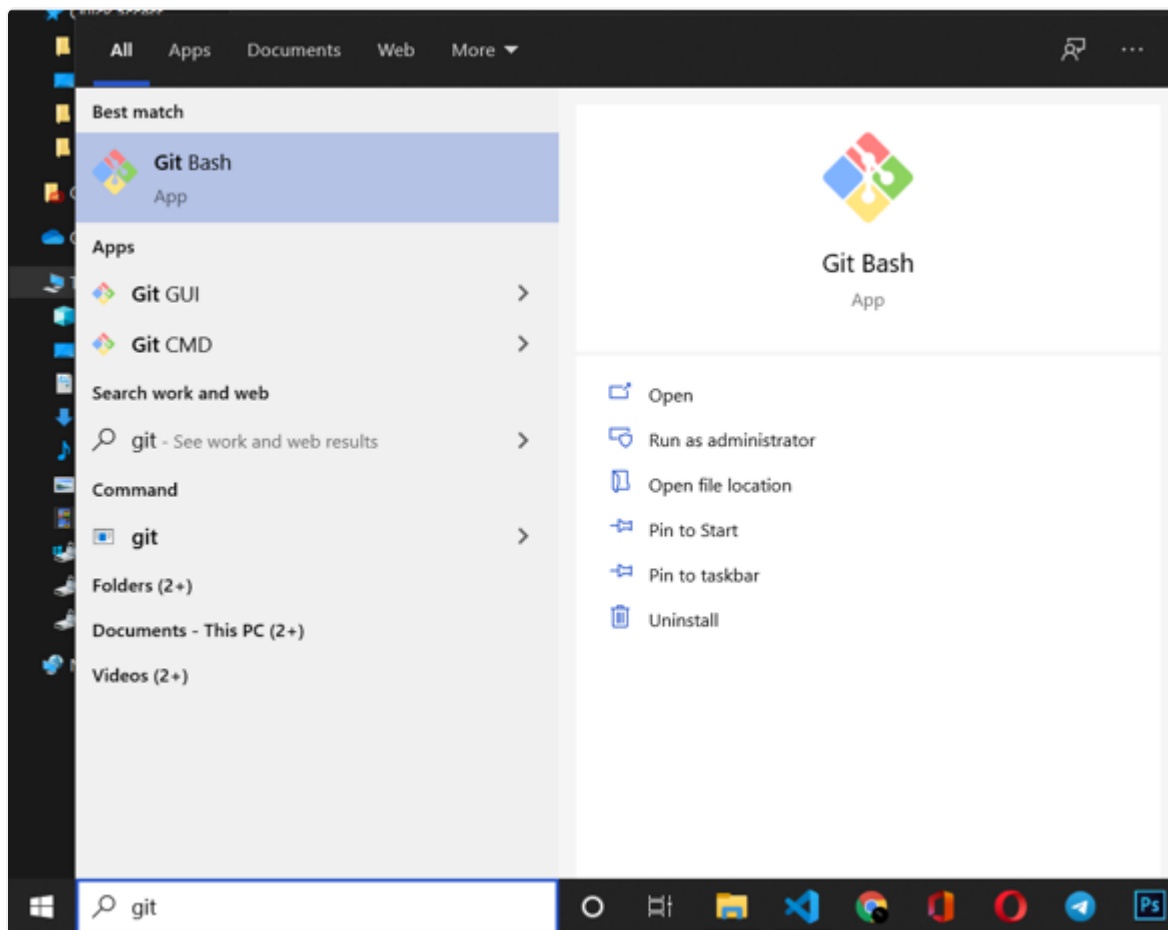

NOTE:

while doing this tutorial, if VSCode ask for sign in, then simply sign in with your GitHub account and give all permissions

rest of the steps will be same

1. Setting USER

1. Search for `git bash` in your PC and open it

2. Now git bash terminal is open.
3. Now type the following command in the terminal.

command to set user name

```
git config --global user.name "Your User Name"
```

Eg : `git config --global user.name sailesh307`

command to set user email

```
git config --global user.email "Your Email"
```

Eq : `git config --global user.email sailesh953@gmail.com`

It will look like this.

```
MINGW64/c/Users/Sailesh
Sailesh@LAPTOP-507C3S50 MINGW64 ~
$ git config --global user.name sailesh307

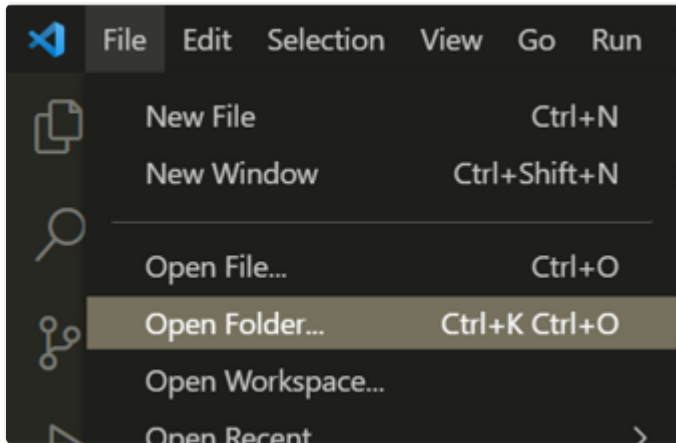

Sailesh@LAPTOP-507C3S50 MINGW64 ~
$ git config --global user.email sailesh953@gmail.com
```

Now you can close the terminal.

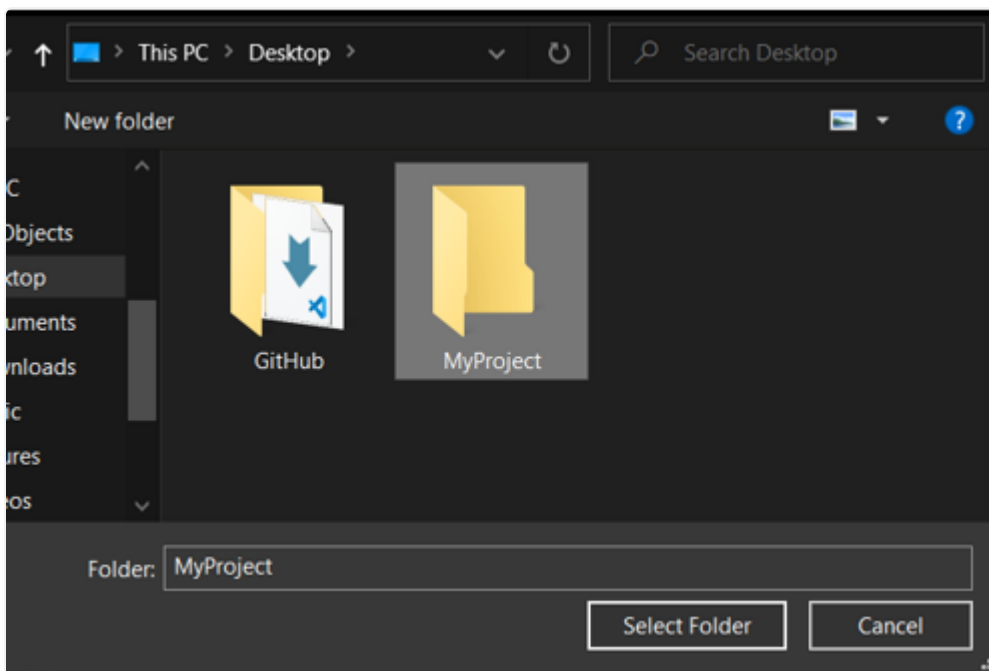

[Note: This is one time process only. So, we don't need to do this again and again. Just do it once and you are good to go.]

2. Open folder in VSCode

1. Open VsCode
2. Select file > Open Folder

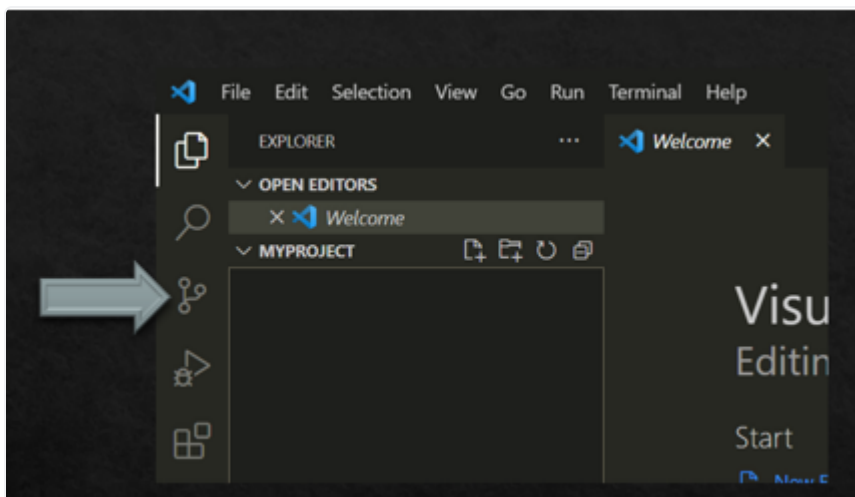

3. now select your Folder that you want to upload.

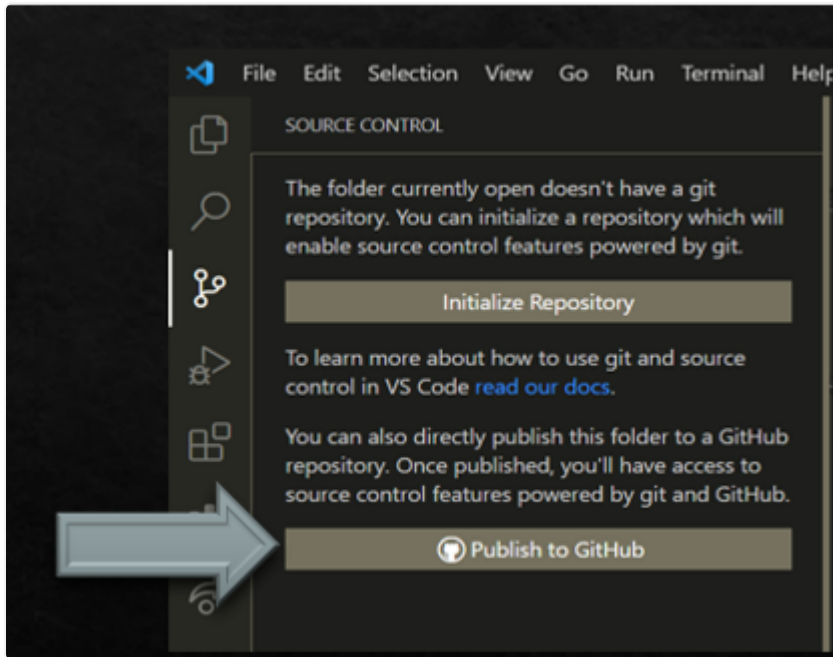

3. Publishing to Github

1. Select Source Control Option

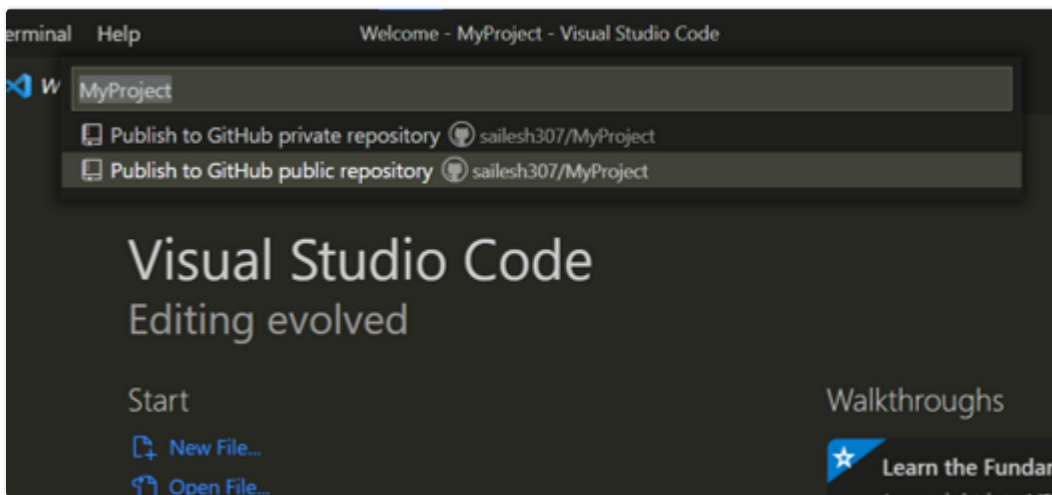

2. Now click on Publish to GitHub

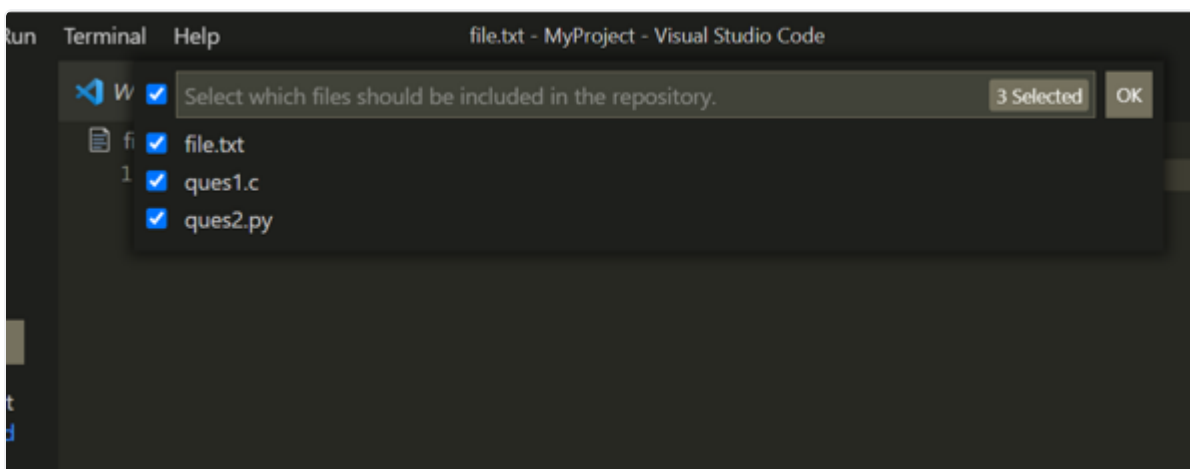

3. Select option for private or public repository

private => only you can see the repository

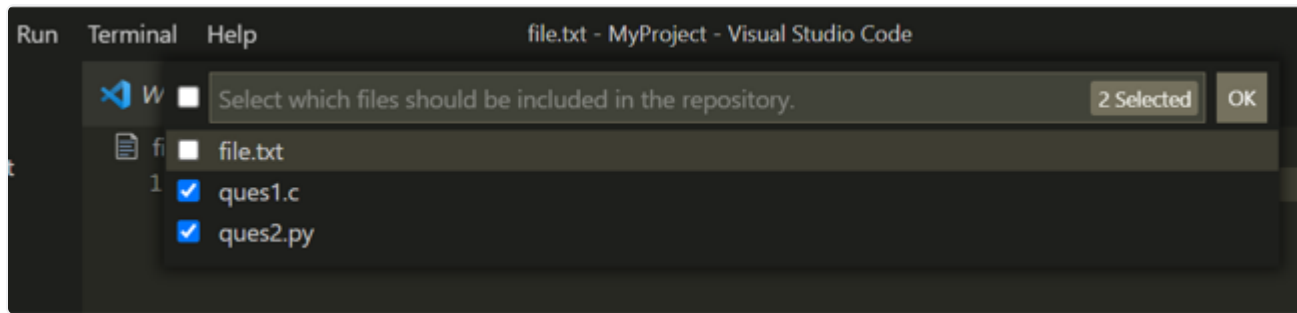

public => anyone can see the repository

4. Now uncheck the checkbox of those file that you don't want to upload

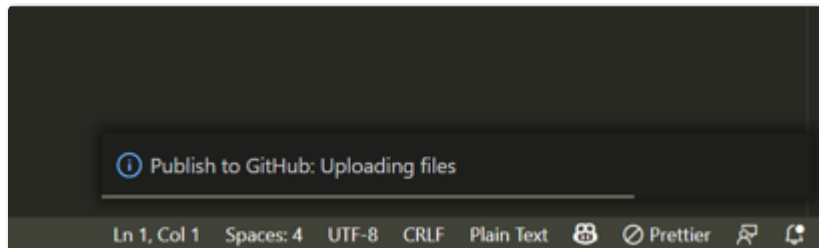

I don't want to upload file.txt file so I am unchecking it.

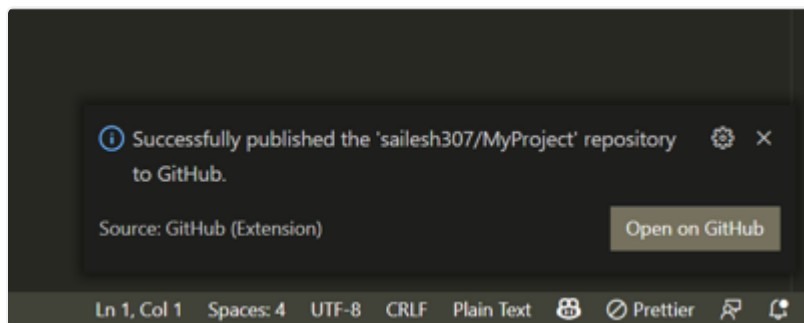

5. then press OK

Now it will start uploading your files to your GitHub repository.

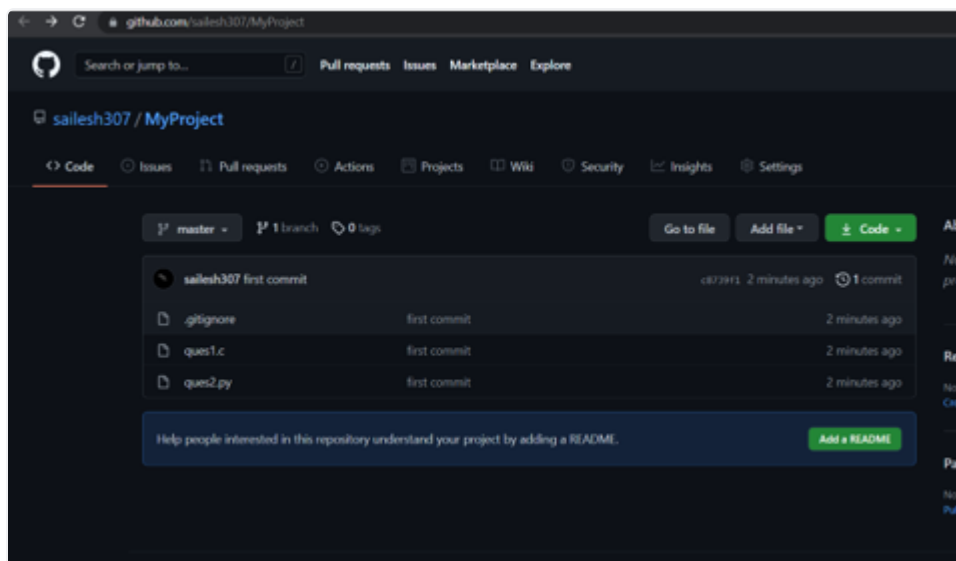

after few second Upload will complete.

Now click on Open on GitHub to view the repository.

Now repo will be opened in your browser.

Now in your Vscode you will see a new file named as .gitignore.
this file will contain all the files that will not upload to github.
you can add any file that you want to ignore.
