

CNF (Chomsky Normal Form) (3 Marks)

→ on the right side of CFG, only two types of length is allowed.

(i) length 1 (no of symbol is 1) : terminal symbol

(ii) length 2 (no of symbol is 2) : both should be nonterminal

i.e. A production of form :

$$A \rightarrow BC$$

or

$$A \rightarrow a$$

where $A, B, C \in V$ and $a \in T$

is called as CNF.

Here, V = non terminal symbols (capital letters)

T = terminal symbol (small letters, special symbols)

GNF (Greibach Normal Form)

Every production must begin with a terminal:

$$A \rightarrow a\alpha$$

where: a is a terminal

α is a sequence of non terminals
